TWITCH SOLVES ISL

Episode 65

Problem

Find all functions $f: \mathbb{N} \rightarrow \mathbb{N}$ which satisfy $f(a^2 + b^2) = f(a)f(b)$ and $f(a^2) = f(a)^2$ for all positive integers a and b .

Solution

The answer is $f \equiv 1$ only, which works. We prove it's the only one.

The bulk of the problem is:

Claim. If $f(a) = f(b) = 1$ and $a > b$, then $f(a^2 - b^2) = f(2ab) = 1$.

Proof. Write

$$\begin{aligned} 1 &= f(a)f(b) = f(a^2 + b^2) = \sqrt{f((a^2 + b^2)^2)} \\ &= \sqrt{f((a^2 - b^2)^2 + (2ab)^2)} \\ &= \sqrt{f(a^2 - b^2)f(2ab)}. \end{aligned} \quad \square$$

By setting $a = b = 1$ in the given statement we get $f(1) = f(2) = 1$. Now a simple induction on n shows $f(n) = 1$:

- If $n = 2k$ take $(u, v) = (k, 1)$ hence $2uv = n$.
- If $n = 2k + 1$ take $(u, v) = (k + 1, k)$ hence $u^2 - v^2 = n$.
