TWITCH SOLVES ISL

Episode 123

## **Problem**

Find the real numbers  $x$  and  $y$  that minimize the sum

$$\sqrt{2(x^2 + y^2)} + \sqrt{2(x^2 + y^2) + 2(x - y) + 1} + \sqrt{2(x^2 + y^2) + 2(x + y) + 1}.$$

## **Video**

## Solution

Let  $S$  be sum. Then

$$\begin{aligned}\frac{S}{\sqrt{2}} &= \sqrt{x^2 + y^2} \\ &\quad + \sqrt{(x + 1/2)^2 + (y - 1/2)^2} \\ &\quad + \sqrt{(x + 1/2)^2 + (y + 1/2)^2}\end{aligned}$$

Let

$$\begin{aligned}A &= (0, 0) \\ B &= (-1/2, 1/2) \\ C &= (-1/2, -1/2).\end{aligned}$$

Want to minimize  $PA + PB + PC$  where  $P \in \mathbb{R}^2$ , so take  $P$  to be the Fermat point:

$$P = \left(-\frac{1}{2} + \frac{1}{2\sqrt{3}}, 0\right).$$
